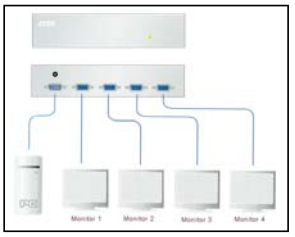
SVGA Monitor Splitter & Booster

VS94A



The Video Separator is a signal booster and splitter that is used to take video input from a single source and direct it to four video outputs for monitors using analog signals. The signal boost obtained by using the VS92A,VS94A , VS98A allows you to not only split the signal but to extend the distance so that you can send the signal to about 210 feet. (Your average VGA card, combined with a standard VGA cable, can send a clear VGA signal approximately 25 feet.) This makes public broadcasts from a single computer very feasible. If you want to display the same information on many monitors at once, such as in a classroom environment, or at a demonstration, this product performs incredibly well.

One Video Input to 2/4/8 Video Outputs

Part No	Description	Price
VS92A	1 PC to 2 VGA Monitor Splitter	$50.00

Ultra Thin SVGA Monitor Cables

(with stand-off screws)

(dust-protection cover)

Connects any VGA/QXGA video display
to any computer, projector, HDTV, switch or distribution amplifier. This high-performancecable is fully wired for maximum compatibility with both PC & HDTV applications. UltraThin diameter provides space-saving design and flexibility not found on regular VGA cables.

- Uses premium coax wires for exceptional video clarity
- Fully-wired to support VESA DDC2 power requirement
- Triple-shield allows connection of up to 200ft without booster
- Injection molded hood with full shielding for EMI/RFI protection
- UL AWM 20276 cable with strain relief and low-profile connectors
- RGB signals & shell are individually grounded to eliminate interference
- RoHS compliant & Lifetime Warranty

(Wall Plate Mounted)

Interchangeable or reversible mounting allows you to replace the thumbscrews with two included stand-off screws.This allows secure mounting to the wall plate or panel. Shallow back shell allows installation through small tubing and tight space.

The 1ft male to female PortSaver cable is designed to save port from the wear and tear of constant plugging and unplugging. It can also be used to create room in tight space situation

FAQ:: What is different between Single Link Digital and Dual Link Digital?

Ans: DVI-D is a digital ONLY connection. The difference between Single Link and Dual Link is that each supports varying resolutions. DVI-D Single Link can support up to 1920 x 1080 at 60 Hz. DVI-D Dual Link can support up to 2048 x 1536 at 60 Hz. DVI cables are used with new video cards for higher resolution over VGA, they are also used with new digital TV's and HD decoders.

DVI-I Dual Link (Digital and Analog)
(notice the three rows of eight pins and that the "flat blade" contact seen to the left has two contacts above and below it)
DVI-I can possibly connect to DVI-I, DVI-A, DVI-D or DFP.

DVI-I Single Link (Digital and Analog)
(notice the three rows have two missing pins in the center and that the "flat blade" contact seen to the left has two contacts above and below)
DVI-I will connect to DVI-I, DVI-A, DVI-D or DFP

DVI-D Dual Link (Digital only)
(notice the three rows of eight pins and that the "flat blade" contact seen to the left has no contacts above and below it)
DVI-D will connect to DVI-I, DVI-D or DFP.

DVI-D Single Link (Digital only)
(notice the three rows have two missing pins in the center and that the "flat blade" contact seen to the left has no contacts above and below it)
DVI-D will connect to DVI-I, DVI-D or DFP.

DVI-A (Analog only)
Notice the three rows of eight pins have three pins missing in the first row, five missing in the second row and four missing in the third row, and that the "flat blade" contact seen to the left has two contacts above and below it. There is no single or Dual link in analog cables.
DVI-A can be connected to either DVI-I or VGA

VGA (Analog only)
Standard "HD15" VGA (SVGA/XGA/SXGA/UXGA) connector for a regular analog monitor. VGA can be connected to either DVI-I or DVI-A

HDMI - DVI Cables

HDMI, is the consumer electronic industry's first connection capable of transmitting uncompressed digital audio/video signals. Components featuring HDMI can transmit both digital audio and video over one convenient cable, replacing the tangled mess that resides behind many home theater components.

DVI Video Repeater

Linkskey DVI Repeater Signal Enhancing Device (over 50 ft)

The LDE-050 DVI Repeater is a device that can help stabilize and enhance the digital video signals being carried over the DVI cable for longer distance.

The DVI interface technology uses purely digital transmission to eliminate the distortion due to digital/analog conversion seen in the conventional HDB interface. However, digital signals can also suffer from degradation and attenuation due to cabling distance factor. The LDE-050 DVI Repeater is the solution to extend your DVI cabling for longer distance yet retains best digital video quality.

When your servers or network devices just locked up and stopped responding, it can only be remedied by cycling power off and on. As simple as this reboot procedure can be, it nevertheless requires the admin to attend the server room just to switch the power off and on again. But what if the admin is worlds away from the server room and yet has to respond to this server lock up immediately? Well, a IP-based KVM Switch,a remote power control module, such as LKV-IOP08 , might be the right and the only reliable solution....

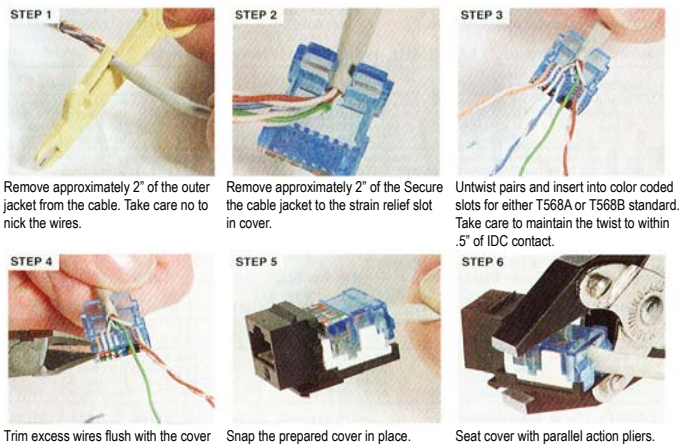
How to Wire CAT5e Jack



STEP 1
Remove approximately 2" of the outer jacket from the cable. Take care no to nick the wires.
STEP 2
Remove approximately 2" of the Secure the cable jacket to the strain relief slot in cover.
STEP 3
Untwist pairs and insert into color coded slots for either T568A or T568B standard. Take care to maintain the twist to within .5" of IDC contact.
STEP 4
Trim excess wires flush with the cover edge.
STEP 5
Snap the prepared cover in place.
STEP 6
Seat cover with parallel action pliers.

Telephone Cables

High quality at an affordable price makes our Silver Satin Flat Modular patch cables the right choice for your project. Featuring RJ11, RJ12,and RJ45 plugs and Cross Wiring, these cables are designed to work with most telephone systems.

Category 6 Unshielded Twisted Pair Patch Cords - For the Most Demanding Environments

Our 500MHz Cat6 patch cables easily handle bandwidth intensive applications and more. SF Cablee's high speed Cat6 patch cables are well constructed using 500 MHz Cat6 bulk cable, which consists of 4 unshielded twisted pairs, 24 AWG, stranded conductors, and a PVC jacket plus they are UL certified. We terminate the Cat6 patch cables with RJ45 plugs, which are staggered and are plated with 50 microns of gold plating per contact. We terminate the snagless molded booted Cat6 patch cables with short body RJ45 plugs, which are plated with 50 microns of gold plating per contact. Constructed with high-quality wire and a shortened body plug will keep Near-end Crosstalk (NEXT) levels to a minimum.

SCSI Products

Are you looking for speed, performance and quality for your SCSI environments? Our SCSI Cable is fully molded, built with UL 2919 double-shielded high-impedance twisted pair wire giving you the best possible throughput. These cables are built to meet ANSI specifications to ensure speed, performance and quality.

SCSI 1 Cable

SCSI 1 CN 50 Cables allow your SCSI devices to operate at their peak in performance. The 50-pin Centronics connector is most commonly used on peripheral devices but is also found on the oldest SCSI host cards.

Using the correct SCSI adapter is crucial to the ability of your SCSI drives and peripherals to work properly at their maximum speed. SCSI adapters have different types of SCSI connectors and/or "gender" of connectors on each end. As SCSI got faster and "wider", it was necessary to update the connector types to "newer", "better", "faster" connector types. SInce you don't want to have a separate SCSI card for each blasted type of SCSI device or connector. It is easier and less costly to use a SCSI adapter.

Remarks: Before you can choose a SCSI adapter, you should be sure of your connector type.

SCSI Terminators

Passive - Does not regulate power for termination and provides impedance close to that of the cable

Active - Control the impedance at the end of the SCSI bus by using a built-in voltage regulator

Differential - Supports longer cable lengths and higher data transfer speeds. Voltage fluctuations do not affect data signals

Active negation - Maintains voltage control by restricting signal voltages

USB 2.0 High Speed Active Extension Cable

USB 2.0 repeater cable is not a passive extension cable. it is an active device. The USB signals going in and out of the extension cable are buffered to assure signal quality and the meeting of the USB's electrical and timing spec. Using passive cables for the purpose of extension will result in signal errors and is not recommended.

LANtest Pro

260103

The LAN test Pro is a small hand held tester that enables the user to quickly read the status of Ethernet twisted pair cables. It tests for faults such as open circuits, shorts, crossed pairs, reversed pairs, and split pairs in seconds. The tone generator function can send a signal through your installed cables and probe can then trace the cable to locate the fault. The LANtest Pro includes one master unit and one remote unit easily operated by one person testing patch cords or installed cables. The small remote unit is designed to slip into the master unit to prevent loss or damage.
